

A Keyboard Function Template  
By Andrew E. Price

Simply load the included KEYBOARD.WPT template file (see figure below) into WordPerfect for DOS 6.x, wherever you keep the templates (WPT files). Then just edit the text in the table, if desired.

It works fine on my Epson Action Laser II emulating a HP Laserjet IIp, but any laser printer should do. CTRL and SHIFT lines are shaded and may not print too well on dot matrix printers. If you use a dot matrix printer you may want to remove the shading.

This document and KEYBOARD.WPT are Copyright 1993 by Andrew E. Price. These files cannot be sold, however, they may be freely distributed as long as they are kept together.
