

A Quick Way to Add to QuickCorrect
WordPerfect Magazine
Tips

QuickCorrect allows you to add misspelled words in a glossary with the correct spelling and automatically replace the wrong word as you type. I've created the included QC.WPM macro that quickly takes you to the dialog box, where you can add the words you want.

To play the macro, press Macro (Alt+F10), type "qc" and press (Enter). The dialog box is immediately displayed, and you can add and delete words as you need.
