

Convert Comments to Shaded Tables WordPerfect Magazine

If you want your comments to stand out in a document, the included CMNT2TBL.WPM macro converts comments made by the Comment feature to shaded table cells.

To use the macro, press Play Macro (Alt+F10), type *cmnt2tbl*, then press (Enter). The comments in your document are quickly converted to shaded table cells. If you wish, press Print/Fax (Shift+F7), (R) Print to print the document.

If you want to keep the original comments, then exit without saving or save the converted document with a different name.
