

Foreign Language Keyboards WordPerfect 6.0 Super Book

The following foreign language keyboard files are bundled in the included KEYBORDS.ZIP file:

FRENCH.WPK	French
GERMAN.WPK	German
SPANISH.WPK	Spanish
RUSSIAN.WPK	Cyrillic

Copy these files to your personal or shared macro directory. To select a new keyboard, choose Setup (Shift-F1), Keyboard Layout (4). Select the keyboard that you want.

These keyboard layouts are designed to work with the "dead key" method of adding accents and diacriticals. Press the] key plus a vowel to insert that vowel with the acute accent. Press the [key followed by a vowel to insert that vowel with the grave accent. For the Russian keyboard, we used (Alt-]) and (Alt-[). We chose this method for inserting accented characters to avoid conflicts with the Alt-letter and Ctrl-letter key combinations used for pull-down menus and Quick Keys.

If you need to enter one of the original characters while you are working with a redefined keyboard, press (Ctrl-6) (a regular numeric 6 on the top row of your keyboard, not a function key) to return to the default keyboard. Press (Ctrl-6) when you would like to switch back. These shortcut keys are much faster than changing your keyboard layout in Setup.
