

## Instant Page Borders WordPerfect Magazine Tips

I created the included BORDER.WPM macro because I use page borders constantly. WP has 14 default borders you can create with a macro. The BORDER.WPM macro lets you quickly choose and apply any one of the borders to your page. Play the macro by pressing Play Macro (Alt+F10), typing "border," then pressing (Enter). Choose a border from the menu (see Figure 1 below), and the macro creates it for you.

Figure 2 below shows thumbnails of each border type. These comport with the choices in the macro's menu. For example, choice 1 comports with the top left border; choice 2 comports with the top border directly to the right of the top left; choice 8 comports with the bottom left border; and so on.

– Jerry Patterson, Billings, MT

Note: The borders can be viewed only from the View Document screen. Press (Shift-F7), 7, to get there.
